From: The Imaging Source's Product Management

Date: March 18th, 2026

Subject: End-of-Life (EOL) Announcement for **tiscamera SDK** by The Imaging Source (TIS).

To whom it may concern,

We would like to inform you about the planned End-of-Life (EOL) of the tiscamera SDK and outline the transition to its successor, IC Imaging Control 4 or newer.

The official EOL date for tiscamera SDK is **April 1st, 2029**. This timeline aligns with the end of the standard lifecycle of Ubuntu 24 LTS, which is currently the reference system we support.
Please note that Ubuntu 26 LTS will no longer receive active implementation support from our side.

Effective immediately, tiscamera SDK and all related projects have entered maintenance mode.
This means:

- No further active development will take place.
- Bug fixes will be implemented only where feasible and with minimal effort.

At the EOL date, the tiscamera SDK repository will be archived in accordance with GitHub's archiving guidelines.

The EOL announcement also applies to the following related projects (unless already announced separately):

- tcamdutils
- tcamdutils-cuda
- tcamtegrasrc

As a successor, we recommend transitioning to IC Imaging Control 4 or newer. In particular, the ic4-gstreamer package provides a GStreamer source that is nearly identical in functionality to tcamsrc/tcambin, enabling a straightforward migration path.

We strongly encourage all users to begin planning their transition to IC Imaging Control to ensure continued support and access to future enhancements.

If you have any questions or require assistance with migration, please do not hesitate to contact us.

Any supply will be subject to TIS's capacity and resource constraints.
Obligations beyond the final ship date will be limited to warranty support only.
The supply of products will be subject to TIS's general terms and conditions of sale or any specific contractual terms agreed between the parties.
