Industrial Cameras:
Getting Started with GigE Board Cameras
Unboxing

- The items above are included with the GigE board camera.
Unscrew the four nuts from the camera back.
Getting started with GigE Board Cameras

- Remove protective foil from sensor
- Remove the back PCB
• Place the lens holder over the sensor on the front of the PCB. Turn the PCB over. Using the two fixing screws provided, affix the lens holder from the back of the PCB. The red circles above show the placement of the fixing screws.
• With the lens holder now mounted to the front of the PCB, replace the back PCB to its original position ensuring that the inter PCB connector is closed.
